- Permissions control access to files and folders.

Types:

Sharing Permission

Applied when folder is shared over network

NTFS Permission

Applied locally and over network

More secure and detailed

[Q-7]. Use of File and Folder Permission

- Protect data

Restrict unauthorized access

Allow read/write/modify access

Improve security

[Q-8]. Steps to Give Folder Read Only Permission

- > 1.Right click folder
 - 2.Select Properties
 - 3.Open Security tab
 - 4.Click Edit
 - 5.Select user
 - 6.Check Read
 - 7.Uncheck Write/Modify
 - 8.Click Apply → OK
-

[Q-9]. Steps to Give File Only Admin Permission

- > Right click file → Properties

- 1.Open Security
 - 2.Click Advanced
 - 3.Disable inheritance
 - 4.Remove other users
 - 5.Add Administrator
 - 6.Give Full Control
- Click Apply
-

[Q-10]. Practical: Change Ownership of Folder and Subfolders

> Right click folder → Properties

Security → Advanced

Click Change beside Owner

Enter new username

Check:

Replace owner on sub containers and objects

Click Apply → OK

[Q-11]. What is OS?

- Operating System (OS) is system software that manages hardware and software resources.

Examples:

Windows

Linux

macOS

[Q-12]. Types of OS

- > 1. Single User OS
 - 2. Multi User OS
 - 3. Network OS
 - 4. Real Time OS
 - 5. Distributed OS
 - 6. Mobile OS
-

[Q-13]. Practical: Create Bootable Kali Linux USB & Install

Using Rufus:

- Download Kali ISO

- 1. Insert USB drive
- 2. Open Rufus
- 3. Select USB
- 4. Select Kali ISO
- 5. Click Start
- 6. Boot from USB

Follow installation steps

[Q-14]. Practical: Create Windows 10 Bootable USB & Install

- > 1. Download Windows 10 ISO from Microsoft Windows 10 Download
- 2. Open Rufus
- 3. Select ISO and USB
- 4. Click Start
- 5. Boot system using USB
- 6. Install Windows

[Q-15]. Create macOS Big Sur Bootable USB using UniBeast

> Download:

macOS Big Sur

UniBeast

Format USB as Mac OS Extended

Open UniBeast

Select macOS Big Sur

Create bootable USB

[Q-16]. What is Clean Install?

➤ Installing OS by removing previous OS and formatting drive.

[Q-17]. What is Upgrade Installation?

➤ Installing a newer version of OS while keeping files and applications.

[Q-18]. Practical: Upgrade Windows 8 to Windows 10

> Backup data

1.Download Windows 10 setup

2.Run setup.exe

Choose:

Upgrade this PC now

Follow installation instructions

[Q-19]. What is Partitioning?

- Dividing a hard disk into separate sections.
-

[Q-20]. What is Partition?

- A partition is a logical division of storage space.
-

[Q-21]. What is Format?

- Formatting prepares storage media for use by creating a file system.
-

[Q-22]. Format Partition Using CMD

> Disk part

list disk

select disk 0

list partition

select partition 1

format fs=ntfs quick

[Q-23]. Administrative Tools

Disk Management

1. Device Manager

2. Event Viewer

- 3.Services
 - 4.Task Scheduler
 - 5.Computer Management
 - 6.Local Security Policy
 - 7.Performance Monitor
-

[Q-24]. What is Disk Management Tool?

- A Windows utility used to manage disks and partitions.
-

[Q-25]. Operations in Disk Management

- 1.create partition
 - 2.Delete partition
 - 3.Format partition
 - 4.Extend/Shrink volume
 - 5.Change drive letter
-

[Q-26]. Practical: Delete Driver from Device Manager

- 1.Open Device Manager
 - 2.Expand device category
 - 3.Right click device
 - 4.Click Uninstall Device
- > Confirm removal

[Q-27]. What are Windows Features?

- Optional Windows components that can be enabled or disabled.

[Q=28]. Install .NET Framework 3.5

Open:

Control Panel → Programs

Click:

Turn Windows features on or off

Check:

.NET Framework 3.5

Click OK

[Q-29]. Disable Internet Explorer

➤ Open Windows Features

Uncheck:

Internet Explorer

Click OK

Restart PC

[Q-30]. What is Backup and Restore?

- 1.Backup: Copying data for safety
 - 2.Restore: Recovering backed-up data
-

[Q-31]. Tools of Backup

- 1.Windows Backup
 - 2.System Restore
 - 3.File History
 - 4.Third-party backup software
-

[Q-32]. Restore from Restore Point

➤ Search:

rstrui.exe

Select restore point

Click Next

Restore system

[Q-33]. Protection from Electrical Fluctuation

➤ Use:

1.UPS

2.Stabilizer

3.Surge protector

[Q-34]. What is OS Based Firewall?

➤ A firewall built into operating system to control incoming and outgoing traffic.

Example:

Windows Defender Firewall

35. Configure Inbound and Outbound Rules

Open:

wf.msc

Select Inbound/Outbound Rules

Click New Rule

Configure ports/programs

[Q-36]. Practical: Block Internet with Firewall

➤ Open Windows Firewall

Outbound Rules → New Rule

Select:

All Programs

Choose:

Block Connection

Apply to all profiles
